Kapitel 3

Klassen-Verzeichnis

3.1 Auflistung der Klassen

Hier folgt die Aufzählung aller Klassen, Strukturen, Varianten und Schnittstellen mit einer Kurzbeschreibung:	
UseCaseAnalyser.View.AboutView	
Interaction logic for AboutView.xaml	. 11
UseCaseAnalyser.App	
Interaction logic for App.xaml	. 11
converts an attribute to a boolean to determine weather the attribute is filled	. 12
UseCaseAnalyser.Converters.BoolToVisibilityConverter	
converts a bool to a visibility	. 14
UseCaseAnalyser.View.DialogView	
Interaction logic for DialogView.xaml	. 15
UseCaseAnalyser.Converters.EntryTypeToImageConverter	
converts a report entry type to a bitmap image	. 18
UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >	
a base class for value converters to extract some logic used in all converters like checking the	Э
type	
UseCaseAnalyser.Converters.GraphElementToStringConverter	
converts a graph element to a readable string -> returns 'Name' attribute or 'no name'	. 23
UseCaseAnalyser.Converters.HideAttributesConverter	
removes the hidden attributes from the attribute enumerable	. 24
UseCaseAnalyser.Converters.IsNullConverter	
determines weather the object is null	. 25
UseCaseAnalyser.Converters.IsNullVisibilityConverter	
determines weather the object is null and returns a visibility null -> hidden not null -> visible	. 27
UseCaseAnalyser.Converters.ReportToEntriesConverter	
converts the report to a collection of all its entries	. 29
UseCaseAnalyser.View.ReportView	
Interaction logic for ReportView.xaml	. 31
UseCaseAnalyser.Properties.Resources	
A strongly-typed resource class, for looking up localized strings, etc	. 31
UseCaseAnalyser.Resources	
A strongly-typed resource class, for looking up localized strings, etc	
UseCaseAnalyser.Properties.Settings	. 36
UseCaseAnalyser.Converters.TraverseLoopCountConverter	
converts an usecasegraph to its TraverseLoopCount attribute value	. 37
UseCaseAnalyser.Converters.UseCaseToScenarioCountConverter	
converts the usecase graph to a description with a count of its scenarios	. 38
UseCaseAnalyser.Converters.UseCaseToVariantCountConverter	
converts an use escarant to its variantCount attribute value	10

6 Klassen-Verzeichnis

UseCaseAnalyser.Converters.VariantTraverseCountConverter	
OSECASEARIAIYSEI. CONVENIEIS. VAITAITI TTAVEISECOUNTCONVENIEI	
converts an usecasegraph to its TraverseVariantCount attribute value	41

Kapitel 4

Datei-Verzeichnis

4.1 Auflistung der Dateien

Hier folgt die Aufzählung aller Dateien mit einer Kurzbeschreibung:

App.cs
Resources.Designer.cs
Converters/AttributeToBoolConverter.cs
Converters/BoolToVisibilityConverter.cs

Kapitel 5

Dokumentation der Namensbereiche

5.1 Paket UseCaseAnalyser

Namensbereiche

- package Converters
- package Properties
- · package View

Klassen

class App

Interaction logic for App.xaml

class Resources

A strongly-typed resource class, for looking up localized strings, etc.

5.2 Paket UseCaseAnalyser.Converters

Klassen

· class AttributeToBoolConverter

converts an attribute to a boolean to determine weather the attribute is filled

class BoolToVisibilityConverter

converts a bool to a visibility

class EntryTypeToImageConverter

converts a report entry type to a bitmap image

· class GenericValueConverter

a base class for value converters to extract some logic used in all converters like checking the type

class GraphElementToStringConverter

converts a graph element to a readable string -> returns 'Name' attribute or 'no name'

· class HideAttributesConverter

removes the hidden attributes from the attribute enumerable

class IsNullConverter

determines weather the object is null

· class IsNullVisibilityConverter

determines weather the object is null and returns a visibility null -> hidden not null -> visible

class ReportToEntriesConverter

converts the report to a collection of all its entries

• class TraverseLoopCountConverter

converts an usecasegraph to its TraverseLoopCount attribute value

• class UseCaseToScenarioCountConverter

converts the usecase graph to a description with a count of its scenarios

· class UseCaseToVariantCountConverter

converts an usecasegraph to its variantCount attribute value

class VariantTraverseCountConverter

converts an usecasegraph to its TraverseVariantCount attribute value

5.3 Paket UseCaseAnalyser.Properties

Klassen

class Resources

A strongly-typed resource class, for looking up localized strings, etc.

· class Settings

5.4 Paket UseCaseAnalyser.View

Klassen

class AboutView

Interaction logic for AboutView.xaml

· class DialogView

Interaction logic for DialogView.xaml

class ReportView

Interaction logic for ReportView.xaml

Kapitel 6

Klassen-Dokumentation

6.1 UseCaseAnalyser.View.AboutView Klassenreferenz

Interaction logic for AboutView.xaml

Öffentliche Methoden

• AboutView ()

creates a new about view

6.1.1 Ausführliche Beschreibung

Interaction logic for AboutView.xaml

6.1.2 Beschreibung der Konstruktoren und Destruktoren

6.1.2.1 UseCaseAnalyser.View.AboutView.AboutView ()

creates a new about view

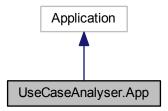

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

• View/AboutView.xaml.cs

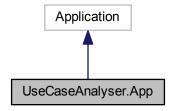

6.2 UseCaseAnalyser.App Klassenreferenz

Interaction logic for App.xaml

Klassendiagramm für UseCaseAnalyser.App:

Zusammengehörigkeiten von UseCaseAnalyser.App:

6.2.1 Ausführliche Beschreibung

Interaction logic for App.xaml

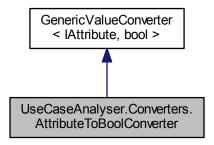

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

· App.cs

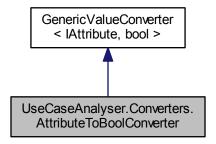

6.3 UseCaseAnalyser.Converters.AttributeToBoolConverter Klassenreferenz

converts an attribute to a boolean to determine weather the attribute is filled

Klassendiagramm für UseCaseAnalyser.Converters.AttributeToBoolConverter:

 $\label{prop:converter} Zusammengeh\"{o}rigkeiten\ von\ Use Case Analyser. Converters. Attribute To Bool Converter:$

Öffentliche Methoden

• override bool Convert (IAttribute source)

converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.3.1 Ausführliche Beschreibung

converts an attribute to a boolean to determine weather the attribute is filled

6.3.2 Dokumentation der Elementfunktionen

6.3.2.1 override bool UseCaseAnalyser.Converters.AttributeToBoolConverter.Convert (IAttribute source)

converts the source value of type TSource to a target value of type TTarget

Parameter

source	value to be converted

Rückgabe

the converted value

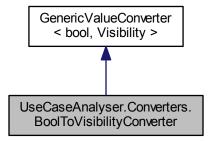

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

Converters/AttributeToBoolConverter.cs

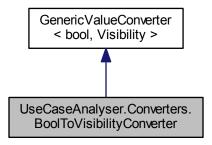

6.4 UseCaseAnalyser.Converters.BoolToVisibilityConverter Klassenreferenz

converts a bool to a visibility

Klassendiagramm für UseCaseAnalyser.Converters.BoolToVisibilityConverter:

Zusammengehörigkeiten von UseCaseAnalyser.Converters.BoolToVisibilityConverter:

Öffentliche Methoden

override Visibility Convert (bool source)

converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.4.1 Ausführliche Beschreibung

converts a bool to a visibility

6.4.2 Dokumentation der Elementfunktionen

6.4.2.1 override Visibility UseCaseAnalyser.Converters.BoolToVisibilityConverter.Convert (bool source)

converts the source value of type TSource to a target value of type TTarget

Parameter

source	value to be converted

Rückgabe

the converted value

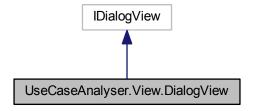

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

• Converters/BoolToVisibilityConverter.cs

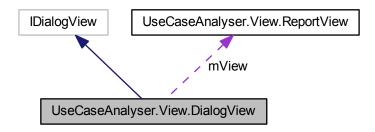

6.5 UseCaseAnalyser.View.DialogView Klassenreferenz

Interaction logic for DialogView.xaml

Klassendiagramm für UseCaseAnalyser.View.DialogView:

Zusammengehörigkeiten von UseCaseAnalyser.View.DialogView:

Öffentliche Methoden

- DialogView ()
 - creates a new dialog view and sets the data context
- FileInfo OpenFileDialog (string filter, FileDialogType dialogType, string predefinedName=null)
 opens a file dialog and returns the file
- void OpenMessageBox (string header, string content, MessageType messageType)
 opens a message box with the given parameters
- void OpenReportResult (Report viewModel)
 - opens the report view
- void OpenAboutView ()
 - opens the about view
- void RedrawGraph ()

lets the use case graph viewer redraw the graph, which is currently represented

Private Methoden

• void ExitMenuItem_OnClick (object sender, RoutedEventArgs e)

Private Attribute

ReportView mView

6.5.1 Ausführliche Beschreibung

Interaction logic for DialogView.xaml

6.5.2 Beschreibung der Konstruktoren und Destruktoren

6.5.2.1 UseCaseAnalyser.View.DialogView.DialogView ()

creates a new dialog view and sets the data context

6.5.3 Dokumentation der Elementfunktionen

6.5.3.1 void UseCaseAnalyser.View.DialogView.ExitMenuItem_OnClick (object sender, RoutedEventArgs e) [private]

6.5.3.2 void UseCaseAnalyser.View.DialogView.OpenAboutView ()

opens the about view

6.5.3.3 FileInfo UseCaseAnalyser.View.DialogView.OpenFileDialog (string *filter*, FileDialogType *dialogType*, string *predefinedName* = null)

opens a file dialog and returns the file

Parameter

filter	filter of the files
dialogType	dialog type (open or save)
predefinedName	the default file name

Rückgabe

the file which has been selected

6.5.3.4 void UseCaseAnalyser.View.DialogView.OpenMessageBox (string header, string content, MessageType messageType)

opens a message box with the given parameters

Parameter

header	header of the message box
content	content of the message box
messageType	type of the message -> determines the message box icon

6.5.3.5 void UseCaseAnalyser.View.DialogView.OpenReportResult (Report viewModel)

opens the report view

Parameter

viewModel	the report which is used as viewmodel of the report view

6.5.3.6 void UseCaseAnalyser.View.DialogView.RedrawGraph ()

lets the use case graph viewer redraw the graph, which is currently represented

- 6.5.4 Dokumentation der Datenelemente
- **6.5.4.1 ReportView UseCaseAnalyser.View.DialogView.mView** [private]

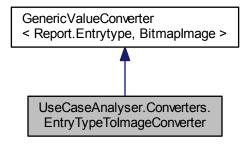

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

View/DialogView.xaml.cs

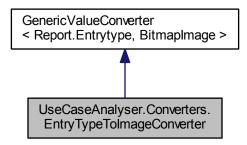

6.6 UseCaseAnalyser.Converters.EntryTypeToImageConverter Klassenreferenz

converts a report entry type to a bitmap image

 $Klassendiagramm\ f\"{u}r\ Use Case Analyser. Converters. Entry Type Tolmage Converter:$

Zusammengehörigkeiten von UseCaseAnalyser.Converters.EntryTypeToImageConverter:

Öffentliche Methoden

override BitmapImage Convert (Report.Entrytype source)
 converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.6.1 Ausführliche Beschreibung

converts a report entry type to a bitmap image

6.6.2 Dokumentation der Elementfunktionen

6.6.2.1	override BitmapImage UseCaseAnalyser.Converters.EntryTypeToImageConverter.Convert(Report.Entrytype source)
	ts the source value of type TSource to a target value of type TTarget

Parameter

source	value to be converted

Rückgabe

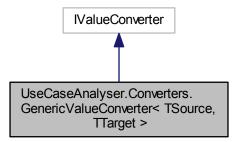

the converted value

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

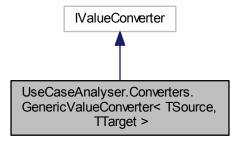

• Converters/EntryTypeToImageConverter.cs

6.7 UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget > Template-Klassenreferenz

a base class for value converters to extract some logic used in all converters like checking the type Klassendiagramm für UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >:

Zusammengehörigkeiten von UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >:

Öffentliche Methoden

- object Convert (object value, Type targetType, object parameter, CultureInfo culture)
 - converts the source value to the target value
- object ConvertBack (object value, Type targetType, object parameter, CultureInfo culture)
 - converts the target value to the source value
- abstract TTarget Convert (TSource source)
 - converts the source value of type TSource to a target value of type TTarget
- virtual TSource ConvertBack (TTarget target)
 - converts the target value of type TTarget back to the source value of type TSource

Geschützte Methoden

GenericValueConverter (bool checkNull=true)

creates a new generic value converter with a value to determine weather the base class should check the values to convert for type, null

Private Attribute

· readonly bool mCheckNull

6.7.1 Ausführliche Beschreibung

a base class for value converters to extract some logic used in all converters like checking the type

Template Parameters

TSource	type of the source object
TTarget	type of the target object

6.7.2 Beschreibung der Konstruktoren und Destruktoren

6.7.2.1 UseCaseAnalyser.Converters.GenericValueConverter < TSource, TTarget >.GenericValueConverter (bool checkNull = true) [protected]

creates a new generic value converter with a value to determine weather the base class should check the values to convert for type, null

Parameter

checkNull	weather to check for null of the object to convert

6.7.3 Dokumentation der Elementfunktionen

6.7.3.1 object UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >.Convert (object value, Type targetType, object parameter, CultureInfo culture)

converts the source value to the target value

Parameter

value	object to convert
targetType	target type for the conversion
parameter	parameter which can be passed in view
culture	the current culture info

Rückgabe

the converted object

6.7.3.2 abstract TTarget UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >.Convert (TSource source) [pure virtual]

converts the source value of type TSource to a target value of type TTarget

Parameter

source	value to be converted
004.00	Talad to be delivered

Rückgabe

the converted value

6.7.3.3 object UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >.ConvertBack (object value, Type targetType, object parameter, CultureInfo culture)

converts the target value to the source value

Parameter

value	object to convert
targetType	target type for the conversion
parameter	parameter which can be passed in view
culture	the current culture info

Rückgabe

the converted object

6.7.3.4 virtual TSource UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >.ConvertBack (TTarget target) [virtual]

converts the target value of type TTarget back to the source value of type TSource

throws NotSupportedException if not overridden

Parameter

target	value to be converted

Rückgabe

the converted value

6.7.4 Dokumentation der Datenelemente

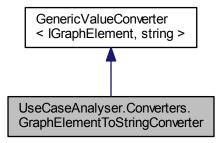

6.7.4.1 readonly bool UseCaseAnalyser.Converters.GenericValueConverter< TSource, TTarget >.mCheckNull [private]

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

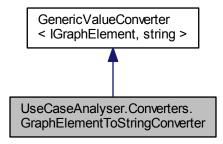

• Converters/GenericValueConverter.cs

6.8 UseCaseAnalyser.Converters.GraphElementToStringConverter Klassenreferenz

converts a graph element to a readable string -> returns 'Name' attribute or 'no name' Klassendiagramm für UseCaseAnalyser.Converters.GraphElementToStringConverter:

 $\label{thm:converters} Zusammengeh\"{o}rigkeiten\ von\ Use Case Analyser. Converters. Graph Element To String Converter:$

Öffentliche Methoden

override string Convert (IGraphElement source)
 converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.8.1 Ausführliche Beschreibung

converts a graph element to a readable string -> returns 'Name' attribute or 'no name'

6.8.2 Dokumentation der Elementfunktionen

6.8.2.1 override string UseCaseAnalyser.Converters.GraphElementToStringConverter.Convert (IGraphElement source)

converts the source value of type TSource to a target value of type TTarget Parameter

source	value to be converted

Rückgabe

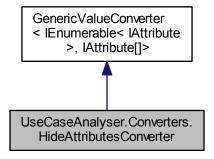

the converted value

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

 $\bullet \ \ Converters/Graph Element To String Converter.cs$

6.9 UseCaseAnalyser.Converters.HideAttributesConverter Klassenreferenz

removes the hidden attributes from the attribute enumerable Klassendiagramm für UseCaseAnalyser.Converters.HideAttributesConverter:

Zusammengehörigkeiten von UseCaseAnalyser.Converters.HideAttributesConverter:

Öffentliche Methoden

override IAttribute[] Convert (IEnumerable < IAttribute > source)
 converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.9.1 Ausführliche Beschreibung

removes the hidden attributes from the attribute enumerable

6.9.2 Dokumentation der Elementfunktionen

6.9.2.1 override l'Attribute [] UseCaseAnalyser.Converters.HideAttributesConverter.Convert (l'Enumerable < l'Attribute > source)

converts the source value of type TSource to a target value of type TTarget $\,$

Parameter

source value to be converted

Rückgabe

the converted value

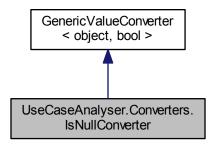

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

• Converters/HideAttributesConverter.cs

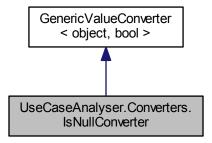

6.10 UseCaseAnalyser.Converters.IsNullConverter Klassenreferenz

determines weather the object is null

Klassendiagramm für UseCaseAnalyser.Converters.IsNullConverter:

Zusammengehörigkeiten von UseCaseAnalyser.Converters.IsNullConverter:

Öffentliche Methoden

• IsNullConverter ()

initializes the converter without checks for null in base class

• override bool Convert (object source)

converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.10.1 Ausführliche Beschreibung

determines weather the object is null

6.10.2 Beschreibung der Konstruktoren und Destruktoren

6.10.2.1 UseCaseAnalyser.Converters.IsNullConverter.IsNullConverter ()

initializes the converter without checks for null in base class

6.10.3 Dokumentation der Elementfunktionen

6.10.3.1 override bool UseCaseAnalyser.Converters.IsNullConverter.Convert (object source)

converts the source value of type TSource to a target value of type TTarget Parameter

source	value to be converted	

Rückgabe

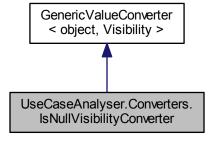

the converted value

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

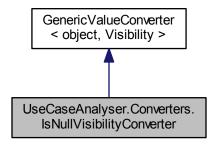

• Converters/IsNullConverter.cs

6.11 UseCaseAnalyser.Converters.IsNullVisibilityConverter Klassenreferenz

determines weather the object is null and returns a visibility null -> hidden not null -> visible Klassendiagramm für UseCaseAnalyser.Converters.IsNullVisibilityConverter:

Zusammengehörigkeiten von UseCaseAnalyser.Converters.IsNullVisibilityConverter:

Öffentliche Methoden

• IsNullVisibilityConverter ()

initializes the converter without checks for null in base class

override Visibility Convert (object source)

converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.11.1 Ausführliche Beschreibung

determines weather the object is null and returns a visibility null -> hidden not null -> visible

6.11.2 Beschreibung der Konstruktoren und Destruktoren

6.11.2.1 UseCaseAnalyser.Converters.IsNullVisibilityConverter.IsNullVisibilityConverter ()

initializes the converter without checks for null in base class

6.11.3 Dokumentation der Elementfunktionen

6.11.3.1 override Visibility UseCaseAnalyser.Converters.IsNullVisibilityConverter.Convert (object source)

converts the source value of type TSource to a target value of type TTarget

Parameter

source	value to be converted

Rückgabe

the converted value

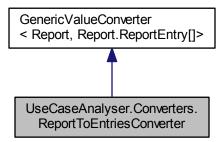

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

Converters/IsNullVisibilityConverter.cs

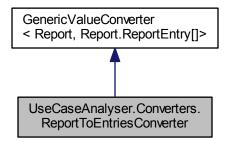

6.12 UseCaseAnalyser.Converters.ReportToEntriesConverter Klassenreferenz

converts the report to a collection of all its entries

Klassendiagramm für UseCaseAnalyser.Converters.ReportToEntriesConverter:

Zusammengehörigkeiten von UseCaseAnalyser.Converters.ReportToEntriesConverter:

Öffentliche Methoden

override Report.ReportEntry[] Convert (Report source)
 converts the source value of type TSource to a target value of type TTarget

Weitere Geerbte Elemente

6.12.1 Ausführliche Beschreibung

converts the report to a collection of all its entries

6.12.2 Dokumentation der Elementfunktionen

6.12.2.1 override Report.ReportEntry [] UseCaseAnalyser.Converters.ReportToEntriesConverter.Convert (Report Source) converts the source value of type TSource to a target value of type TTarget

Parameter

source	value to be converted
--------	-----------------------

Rückgabe

the converted value

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

Converters/ReportToEntriesConverter.cs

6.13 UseCaseAnalyser.View.ReportView Klassenreferenz

Interaction logic for ReportView.xaml

Öffentliche Methoden

• ReportView (Report correspondingReport)

creates a new report view with the corresponding report as view model

6.13.1 Ausführliche Beschreibung

Interaction logic for ReportView.xaml

6.13.2 Beschreibung der Konstruktoren und Destruktoren

6.13.2.1 UseCaseAnalyser.View.ReportView.ReportView (Report correspondingReport)

creates a new report view with the corresponding report as view model

Parameter

corresponding←	the report
Report	

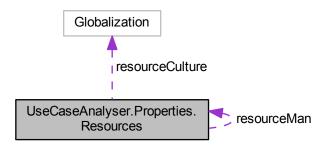

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

View/ReportView.xaml.cs

6.14 UseCaseAnalyser.Properties.Resources Klassenreferenz

A strongly-typed resource class, for looking up localized strings, etc.

Zusammengehörigkeiten von UseCaseAnalyser.Properties.Resources:

Paketfunktionen

• Resources ()

Propertys

- static global::System.Resources.ResourceManager ResourceManager [get]

 Returns the cached ResourceManager instance used by this class.
- static global::System.Globalization.CultureInfo Culture [get, set]

 Overrides the current thread's CurrentUlCulture property for all resource lookups using this strongly typed resource class.

Statische, private Attribute

- static global::System.Resources.ResourceManager resourceMan
- static global::System.Globalization.CultureInfo resourceCulture

6.14.1 Ausführliche Beschreibung

A strongly-typed resource class, for looking up localized strings, etc.

- 6.14.2 Beschreibung der Konstruktoren und Destruktoren
- **6.14.2.1 UseCaseAnalyser.Properties.Resources()** [package]
- 6.14.3 Dokumentation der Datenelemente
- **6.14.3.1** global.System.Globalization.CultureInfo UseCaseAnalyser.Properties.Resources.resourceCulture [static], [private]
- **6.14.3.2** global.System.Resources.ResourceManager UseCaseAnalyser.Properties.Resources.resourceMan [static], [private]

6.14.4 Dokumentation der Propertys

6.14.4.1 global.System.Globalization.CultureInfo UseCaseAnalyser.Properties.Resources.Culture [static], [get], [set], [package]

Overrides the current thread's CurrentUICulture property for all resource lookups using this strongly typed resource class.

6.14.4.2 global.System.Resources.ResourceManager UseCaseAnalyser.Properties.Resources.ResourceManager [static], [get], [package]

Returns the cached ResourceManager instance used by this class.

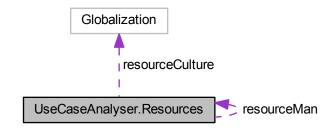

Die Dokumentation für diese Klasse wurde erzeugt aufgrund der Datei:

• Properties/Resources.Designer.cs

6.15 UseCaseAnalyser.Resources Klassenreferenz

A strongly-typed resource class, for looking up localized strings, etc.

Zusammengehörigkeiten von UseCaseAnalyser.Resources:

Paketfunktionen

• Resources ()

Propertys

• static global::System.Resources.ResourceManager ResourceManager [get]

Returns the cached ResourceManager instance used by this class.

• static global::System.Globalization.CultureInfo Culture [get, set]

Overrides the current thread's CurrentUlCulture property for all resource lookups using this strongly typed resource class.

static System.Drawing.Bitmap about_64 [get]

Looks up a localized resource of type System.Drawing.Bitmap.

• static System.Drawing.Bitmap Error [get]

Looks up a localized resource of type System. Drawing. Bitmap.

- static System.Drawing.Bitmap excel_64 [get]
 Looks up a localized resource of type System.Drawing.Bitmap.
- $\bullet \ \ static \ System. Drawing. Bitmap \ graph_lcon \quad \texttt{[get]}\\$

Looks up a localized resource of type System.Drawing.Bitmap.

static System.Drawing.Bitmap Information [get]

Looks up a localized resource of type System. Drawing. Bitmap.

• static System.Drawing.Bitmap log_64 [get]

Looks up a localized resource of type System. Drawing. Bitmap.

static System.Drawing.Bitmap refresh_64px [get]

Looks up a localized resource of type System. Drawing. Bitmap.

• static System.Drawing.Bitmap report_64 [get]

Looks up a localized resource of type System.Drawing.Bitmap.

• static System.Drawing.Bitmap Warning [get]

Looks up a localized resource of type System. Drawing. Bitmap.

static System.Drawing.Bitmap word_64 [get]

Looks up a localized resource of type System. Drawing. Bitmap.

Statische, private Attribute

- static global::System.Resources.ResourceManager resourceMan
- static global::System.Globalization.CultureInfo resourceCulture

6.15.1 Ausführliche Beschreibung

A strongly-typed resource class, for looking up localized strings, etc.

- 6.15.2 Beschreibung der Konstruktoren und Destruktoren
- **6.15.2.1 UseCaseAnalyser.Resources.Resources()** [package]
- 6.15.3 Dokumentation der Datenelemente
- **6.15.3.1 global.System.Globalization.CultureInfo UseCaseAnalyser.ResourceS.resourceCulture** [static], [private]
- $\textbf{6.15.3.2} \quad \textbf{global.System.Resources.ResourceManager UseCaseAnalyser.Resources.resourceMan} \quad \texttt{[static],} \\ \textbf{[private]}$
- 6.15.4 Dokumentation der Propertys
- **6.15.4.1** System.Drawing.Bitmap UseCaseAnalyser.Resources.about_64 [static], [get], [package]

Looks up a localized resource of type System.Drawing.Bitmap.

6.15.4.2 global.System.Globalization.CultureInfo UseCaseAnalyser.Resources.Culture [static], [get], [set], [package]

Overrides the current thread's CurrentUICulture property for all resource lookups using this strongly typed resource class.

6.15.4.3 System.Drawing.Bitmap UseCaseAnalyser.Resources.Error [static], [get], [package]

Looks up a localized resource of type System.Drawing.Bitmap.

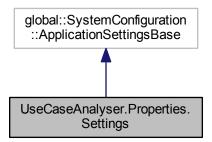

```
6.15.4.4 System.Drawing.Bitmap UseCaseAnalyser.Resources.excel_64 [static], [get], [package]
Looks up a localized resource of type System.Drawing.Bitmap.
6.15.4.5 System.Drawing.Bitmap UseCaseAnalyser.Resources.graph_lcon [static], [get], [package]
Looks up a localized resource of type System.Drawing.Bitmap.
6.15.4.6 System.Drawing.Bitmap UseCaseAnalyser.Resources.Information [static], [get], [package]
Looks up a localized resource of type System.Drawing.Bitmap.
6.15.4.7 System.Drawing.Bitmap UseCaseAnalyser.Resources.log_64 [static], [get], [package]
Looks up a localized resource of type System.Drawing.Bitmap.
6.15.4.8 System.Drawing.Bitmap UseCaseAnalyser.Resources.refresh_64px [static], [get], [package]
Looks up a localized resource of type System.Drawing.Bitmap.
6.15.4.9 System.Drawing.Bitmap UseCaseAnalyser.Resources.report_64 [static], [get], [package]
Looks up a localized resource of type System.Drawing.Bitmap.
6.15.4.10 global.System.Resources.ResourceManager UseCaseAnalyser.Resources.ResourceManager [static],
         [get], [package]
Returns the cached ResourceManager instance used by this class.
6.15.4.11 System.Drawing.Bitmap UseCaseAnalyser.Resources.Warning [static], [get], [package]
Looks up a localized resource of type System.Drawing.Bitmap.
6.15.4.12 System.Drawing.Bitmap UseCaseAnalyser.Resources.word 64 [static], [get], [package]
Looks up a localized resource of type System. Drawing. Bitmap.
```
